

Click [here](#) for additional guidance

- Pre-term formulae are usually started for babies born before 34 weeks gestation, weighing less than 2kg at birth, and IUGR (intra uterine growth retardation).
- These infants should already be under regular review by the Paediatricians. Check correspondence for more details.
- Pre-term and low birthweight infants are particularly vulnerable to over and underfeeding. Therefore, the Health Visitor should monitor growth monthly while the baby is on these formulae:
 - Weight and centile
 - Length and centile
 - Head circumference and centile
- Not all babies need these formulae for the full 26 weeks from expected date of delivery (EDD).
- These products should be discontinued by 6 months **corrected** age (unless advised by the paediatric team).

6 months corrected age = Expected Date of Delivery + 26 weeks

- If there is excessive weight gain (e.g. weight centile over 2 centiles above length centile) at any stage up to 6 months corrected age, **stop** the formula and change to standard OTC formula. Also notify the Paediatric Dietitian/Paediatrician if still under their care.
- The introduction of solids should start no later than 6 months actual age (rather than corrected age) as the gut matures from birth.

Formulae

Formula	Presentation	Cost*	£/Kcal	Notes
Nutriprem 2 Powder® (Cow&Gate)	800g tin	£10.37	£0.26	Birth up to a maximum of 6 months corrected age
